# the Ultimate Ducted Vacuum Hose Management System

## THE RETRACTABLE HOSE

- Hide-A-Hose solves the problem of carrying and storing a ducted vacuum hose.
- You'll never have to carry or store a bulky ducted vacuum hose again. Simply pull out the amount of hose you need from the inlet valve, connect your cleaning wand (with attachment) and begin vacuuming.
- When you're finished, detach the cleaning wand from the hose and the suction from the ducted vacuum power unit retracts the hose into the smart piping system hidden behind the wall.

## For new construction and existing homes

Installation for newer and existing homes is simplified with the reduction of inlet valves needed on each floor. The system caters for hose lengths up to 15 metres, allowing for Fewer inlets. It will save time and make vacuuming more convenient.
